

..and shrinks. The eyes  
and mouth grow larger.

The tail shrinks...

Now front legs begin to grow  
and inside, the tadpole is  
growing lungs for breathing  
on land.

The gills get smaller and  
back legs begin to grow.

At last, the egg has  
become a frog!

Now the frog will leave  
the water to live on land.

BERKELEY PUBLIC LIBRARY

# From Egg to Frog

A tiny tadpole hatches  
from an egg.

The tadpole has feathery gills  
so it can breathe underwater.
